

The Pitch - Why a Car?

The car is called "AWS DeepRacer" and was a huge success for Liberty IT at the end of 2019 and I represented LIT at the Championship Finals last December. It started my journey into Machine Learning and AI.

Some notes on the design.

- The ASCII across "Driving Change" is made up of characters from the array "AWS DeepRacer@LIT".
- The "Change" wording is made from ascii characters array "DriveYourOwnChange@LIT".
- The speed the car travels across the screen is proportional to the speed I used to set a World record at the Championship Finals - <https://bit.ly/2SKzoVr>
- "Driving Change" was spotlighted as it literally drove change for me in my career and learnings.
- I'll be giving a presentation on this topic for Liberty's Recruitment "Tech Carnival" which shows it's an important example of Liberty's eagerness to be apart of new things.
